1 Introduction

1.1 Purpose

This document provides the software requirements specifications (SRS) for the Knowledge is Power project.

1.2 Scope

Knowledge Is Power (KIP) is a web-based legal literacy platform that teaches essential, everyday laws to young adults. Its goal is to help users recognize legally significant situations and understand the consequences of their choices, so they can make more informed decisions. The principal components of KIP are two interactive games: “Fact or Fiction?”, a short-form game that tests common legal misconceptions, and “Choose Your Outcome”, a longer branching scenario game. KIP also supports user accounts, learning topics, progress tracking, and game recommendations based on user performance. KIP is intended to benefit young adults through repeated, low-stakes practice, and to serve as a supplemental educational aid for parents, teachers, and school administrators. [1]

1.5 Overview

Section 2 of this document describes KIP in general terms, including its product perspective, main functions, user characteristics, constraints, and assumptions. Section 3 presents the detailed requirements for KIP.

2 Overall Description

2.1 Product Perspective

KIP is a web-based educational service built around learning topics, interactive games, user progress data, and source-backed legal content. Users play short misconception-based quizzes and longer branching scenarios on Virginia traffic law and copyright law, and KIP uses their performance to recommend future practice. [1]

KIP is made up of a web interface, a Java application that manages accounts, game content, feedback, and recommendations, and a SQLite database that stores user progress and learning content. The application is hosted on a virtual private server and accessed by users through a modern web browser. [1]

2.2 Product Functions

KIP will be accessed through a web browser, where users play two interactive games: “Fact or Fiction?”, a short-form game that tests common legal misconceptions, and “Choose Your Outcome”, a longer branching scenario game. [1] For the prototype, the games cover Virginia traffic law and copyright law as it applies to social media platforms.

Each game offers three adaptive difficulty levels: Level 1 (Relaxed), Level 2 (Standard), and Level 3 (Intense). KIP supports user accounts and tracks each user's progress and game history, which it uses to recommend future games. [1] This data is stored in a server-side SQLite database.

2.3 User Characteristics

The primary users of KIP are young adults ages 16 to 19 who want to learn about everyday laws. They can use KIP as registered users, with saved progress and game history, or as guests, who can play games with a limited set of features. Administrators are a second role. They review KIP's legal content and can revise it or disable it when it may be outdated. Parents and teachers are not direct users, but they benefit from KIP as a supplemental educational aid. [1]
